PROFESSIONAL SUMMARY:

Aspiring Cybersecurity professional with practical experience in vulnerability assessment, web application security, and penetration testing. Proficient in evaluating attack surfaces and validating standard OWASP Top 10 vulnerabilities using Burp Suite, OpenVAS, Nmap, and Wireshark. Experienced in assessing live targets, engineering PoC exploits, and compiling comprehensive technical remediation reports.

EDUCATION:

Keshav Memorial Institute of Commerce & Sciences (Osmania University) Hyderabad, India
Bachelor of Science in Computer Science (Coursework Completed; Degree in Progress) 2022 – Expected 2026

TECHNICAL SKILLS:

- Vulnerability Assessment & Testing: Web Application Security, OWASP Top 10, VAPT, Threat Analysis, Penetration Testing
- Tools & Frameworks: Burp Suite, OpenVAS, Nmap, Wireshark, Kali Linux, Oracle VM VirtualBox
- Networking & Protocols: TCP/IP, DNS, HTTP/HTTPS, OSI Model, Port Scanning, Packet Capture & Inspection
- Programming & Scripting: Python, Java, C++, Bash/Shell Scripting
- Documentation & Reporting: Vulnerability Reporting, Proof-of-Concept (PoC) Documentation, Remediation Guidance

EXPERIENCE:

Digit Defence, Bengaluru, India (Remote)

Cybersecurity Intern (Doc ID: DF260727438)

Jan 2026 – Jul 2026

- Conducted vulnerability assessments and web security testing using Burp Suite and OpenVAS targeting OWASP Top 10 flaws.
- Evaluated live client environments and engineered Proof of Concept (PoC) demonstrations to validate exploitable security flaws.
- Assisted project teams in assessing network attack surfaces and analyzing traffic anomalies using Nmap and Wireshark.
- Formulated technical remediation reports detailing vulnerability severities, reproduction steps, and actionable patch recommendations.

PROJECTS:

- Phishing URL Detection Tool Python, Heuristic Analysis, Regex
- Developed a heuristic detection script to classify deceptive domains by evaluating structural URL entropy and redirection flows.
- Engineered regex pattern extraction to identify obfuscated domain attributes and mitigate typosquatting vectors.
- Implemented automated HTTP response-header inspection to flag endpoints matching known malicious indicators.

Secure Folder Encryptor

Java, Cryptography API, AES-256

- Built a desktop cryptographic application leveraging AES-256 in CBC mode to safeguard sensitive local files at rest.
- Employed PBKDF2 with dynamic salting for robust cryptographic key derivation against dictionary and brute-force attacks.
- Integrated SHA-256 hashing to perform strict pre- and post-decryption file integrity checks.

PRACTICAL LABS & HANDS-ON TRAINING

- Web Application Security Labs PortSwigger Web Security Academy & DVWA
- Solved structured lab challenges spanning SQL Injection (SQLi), Cross-Site Scripting (XSS), CSRF, and Broken Access Control.
- Utilized Burp Suite Repeater and Intruder to craft targeted HTTP/HTTPS payloads and bypass client-side validation mechanisms.

Host Reconnaissance & Traffic Analysis Lab, Kali Linux, VirtualBox, Wireshark

- Configured virtualized target labs in Oracle VM VirtualBox for safe vulnerability probing and penetration practice.
- Executed active host discovery, service enumeration, and OS fingerprinting via the Nmap Scripting Engine (NSE).
- Inspected network packet streams in Wireshark to locate unencrypted credentials, protocol weaknesses, and abnormal traffic.

CERTIFICATIONS&CREDENTIALS:

Cyber Security Internship Experience Certificate – Digit Defence
Verification Document ID: DF260727438

Issued: Jul 2026
